# International Infrastructure Management Manual

Edition 2011 Version 4.0

The ultimate Infrastructure Management resource

This comprehensive update of the internationally renowned **International Infrastructure Management Manual (IIMM)** reflects the advancing field of asset management and ensures this valuable resource continues to lead and shape the international asset management industry.

## What makes this edition of the IIMM a *must-have* guide?

- Case studies represent latest best-practice (for different levels of development – core/advanced) across a wide range of sectors and countries.
- User-friendly manual for the complete range of users - from beginners to advanced practitioners.
- Manual will fit well with the proposed ISO asset management standard.

### Some specific changes include:

A new **Quick Guide** – this easy-to-read overview explains each of the AM functions in simple terms and provides guidance and a summary of the full manual. The Quick Guide references the right section for further detailed information.

**More detail and guidance** around the ‘**appropriate**’ level of **AM maturity**. Each function is described in terms of ‘minimum’, ‘core’, ‘intermediate’ and ‘advanced’ practice with guidance on how to decide the appropriate level for your activity.

**Significant improvement** in developing **optimised operations and maintenance strategies and plans**, with much more detailed and practical guidance.

**Improved guidance** in the area of **asset financial management** - including good funding principles and managing assets within a constrained funding environment.

You will find **New sections** and **case studies** relevant for:

- **AM policy development**, including how the internal and external business context will influence how each organisation undertakes AM.
- **Setting up an effective Organisational Structure** to deliver AM functions, defining the key capabilities required.
- **Quality management processes** that support the AM functions, including documentation, business process mapping and use of quality frameworks.

The IIMM 2011 Edition has been produced with major input and endorsement from the following organisations

**IPWEA**
